

COMPUTED RADIOGRAPHY SYSTEM END-OF-SUPPORT BULLETIN

Manufacturer: Canon Medical Systems
Product Line: Aquilion LB and LB Ultra CR Systems
Bulletin Date: September 2024

Product Discontinuation Notice

Canon Medical Systems announces the discontinuation of technical support for Aquilion LB series computed radiography (CR) systems effective June 30, 2027. This notice applies to all Aquilion LB and LB Ultra systems manufactured between 2008 and 2016.

End-of-Support Date: June 30, 2027

Canon will discontinue technical support, spare parts availability, and software updates for all Aquilion LB series CR systems on June 30, 2027.

Affected Equipment

Model	Manufacturing Years	Configuration	Support End Date
Aquilion LB	2008-2015	Standard 40-slice with standard workstation	06/30/2027
Aquilion LB Ultra	2013-2016	Enhanced 64-slice with advanced reconstruction	06/30/2027

Support Timeline

- Present - 12/31/2025:** Full technical and software support
- 01/01/2026 - 06/30/2027:** Limited support; spare parts availability subject to inventory
- 07/01/2027 onward:** No support or parts availability

Spare Parts Ordering: Facilities should place orders for critical spare parts (tube assemblies, detector systems, cooling modules) by December 31, 2025 to ensure availability.

Clinical Impact

End-of-support has significant implications for your imaging department:

- Extended Downtime:** Equipment failures may require extended repair times or equipment rental
- Tube Replacement:** X-ray tubes are expensive (\$15,000-\$30,000); no manufacturer support after EOL
- Regulatory Compliance:** Continuing to operate unsupported diagnostic equipment may affect accreditation and certification
- Clinical Workflow:** Longer repair times disrupt imaging schedules and patient access

Recommended Transition Plan

Phase 1: Immediate Assessment (Q4 2024 - Q1 2025)

- Document all Aquilion LB/LB Ultra systems at your facility
- Assess equipment condition and maintenance history
- Forecast expected component failures based on MTBF data
- Evaluate volume and throughput needs for replacement planning

Phase 2: Replacement Planning (Q1 - Q2 2025)

- Evaluate next-generation CT systems from Canon and competitors
- Request proposals and pricing for replacement equipment
- Assess space, power, and network requirements for new equipment
- Plan financing and obtain board approval

Phase 3: Transition Implementation (Q3 2025 - Q2 2027)

- Order replacement equipment (lead time 12-16 weeks typical)
- Plan installation and room renovation if needed
- Schedule staff training on new systems (3-4 weeks of intensive training)
- Plan for parallel operation period (both systems running simultaneously)
- Target new equipment operational before 06/30/2027

Replacement Equipment Options

Replacement Platform	Key Features	Support Commitment
Canon Aquilion Prime SP	128-slice MDCT, AI-assisted imaging, cloud-connected, lower radiation dose	10-year support commitment
Siemens SOMATOM Drive	Dual-source 192-slice, cardiology capability, advanced 3D reconstruction	8-year support contract
GE Revolution CT	256-detector-row, spectral imaging capability, AI integration	10-year support commitment

Compliance and Regulatory Considerations

- CMS and accreditation bodies may question use of unsupported diagnostic equipment
- Image quality assurance programs require vendor support for validations
- ACR accreditation may require compliance with equipment age and support guidelines
- Patient liability increases if equipment failure results in diagnostic delay

Support Contact
